- **Electricity** - a form of energy resulting from the existence of charged particles.
- **Current** - a flow of electricity through a conductor.
- **Circuit** - an electrical component that provides a path for an electrical current to flow.
- **Short circuit** - it is a malfunction in an electrical circuit that does not allow the current to travel along an intended path.
- **LED** - light emitting diode.
- **Series** - a type of circuit that provides a route for the flow of electricity that has only one path.
- **Parallel** - a type of closed circuit in which the current divides into two or more paths before recombining to complete the circuit.
- **Conductivity** - the transmission of heat or electricity.
